### Post-doctoral fellow position

#### Control of visual attention and decision making in flying *Drosophila*

##### Basic Information

Post-doctoral fellow for 2 years, starting now or later, stipend of the University of Rostock, Germany

##### Project description

The working group of Fritz Lehmann at the University of Rostock focuses on an integrative approach to investigate the neuronal, biomechanical, and aerodynamical bases of insect flight behaviors. We use genetic and neuronal tools, behavioral essays, robotics devices and several biological imaging methods to dissect the flight cascade in *Drosophila* ranging from sensory input to flow control by wing flapping.

The group seeks a Postdoctoral fellow with strong interests in Neuroethology or Behavioural Biology of *Drosophila*. The aim of the project is to understand the neural basis of control of visual attention and decision making in flying fruit flies. The essays include flight experiments at dynamically changing visual environments and optogenetics on decision making neurons. The project aims to dissect the neural command line from brain to locomotor centres of the flight apparatus in *Drosophila* and offers a wide variety of methods and approaches.

The successful candidate should have:

- A Ph.D. degree or equivalent in Biology or related disciplines
- Strong interest in interdisciplinary research
- Experiences in Neurobiology of insect flight is desirable
- Excellent communication and team-working skills
- Enthusiasm and great commitment to research
- Good command of the English language

We offer:

- A 2-year post-doctoral fellow stipend according to guidelines of the University of Rostock
- An exciting and excellent research environment
- Travel opportunities for training and meetings
- An enthusiastic group working on walking and flying flies

##### Location

The position is offered by the Department of Animal Physiology at the University of Rostock, Germany. The department resides in a modern, state-of-the-art building together with several biological work groups and close to the Departments of Engineering and Electrical Sciences. Rostock is a lovely, mid-sized town located near the Baltic Sea. It features moderate ambient temperature and offers many opportunities for recreation including swimming, sailing, and hiking.

### **Application**

Applications should submit the following documents:

- a detailed Curriculum Vitae
- a cover letter
- a list of publications
- names and addresses of at least two referees.

Equal opportunity is an essential part of our human resources policy. In case of equal qualification, applications from severely disabled people or equivalent are explicitly welcome. The University of Rostock seeks to increase the proportion of women in research and teaching, and particularly encourages female applicants to apply for this position. Applications from foreign scientist and people with migration background are appreciated. Please note that application and travel costs are not reimbursed by the Federal State of Mecklenburg-Vorpommern.

Please send these documents with the identifier **PD04/2023** and as a single PDF-file to **[tierphysiologie@uni-rostock.de](mailto:tierphysiologie@uni-rostock.de)**. The positions will be filled up whenever a candidate is selected. For inquiries and further information please visit our webpage under <https://www.tierphysiologie.uni-rostock.de/> please or send an email to Prof. Fritz-Olaf Lehmann, Department of Animal Physiology at the university of Rostock, Germany (**[fritz.lehmann@uni-rostock.de](mailto:fritz.lehmann@uni-rostock.de)**). We are looking forward to receive your application.
