

Module:	Network Forensics
Lecturer:	Prof. Dr. rer. nat. Clemens H. Cap
Language:	English
Teaching Method:	Lecture and practical exercise
Credit Points:	1 ECTS
Attendance requirements:	Basics in computer science and mathematics to the extent which is characteristic for a third term student in computer science
Goals / Skill:	<p>The student will learn about the threats and attacks against networks. He or she will study techniques for detecting intrusion, for defending networks and for gathering evidence from an attack on a company network.</p> <p>The focus of the module is on understanding the concepts and mechanisms of network security.</p> <p>The goal is to enable the student to defend a network and to derive important information from an ongoing attack.</p>
Detailed Content:	<ul style="list-style-type: none"> • Network intrusion detection. • Building a network monitoring station. • Capturing and analysing network traffic. • Extracting forensic evidence from network traffic.
Media Used:	Electronic Presentation, Blackboard Illustrations, Practical Demonstrations, Lab Exercises by the students.
Literature:	<ul style="list-style-type: none"> • W. Buchanan: Introduction to Security and Network Forensics. Auerbach Publications, 2011. • C. Sanders: Practical Packet Analysis. Pollock. 2011. • S. Davidoff, J. Ham: Network Forensics. Prentics Hall. 2012
Assigned Tutorial:	<p>Network Traffic Analysis</p> <ul style="list-style-type: none"> • The students analyse selected packet traces (DHCP, MySQL logon, Web request). • The study with the help of the Wireshark toolkit, how even encrypted traffic can be subjected to a depp packet inspection, provided suitable certifi-cates are available to the analyst.
Suggested Reading before the start of the summer school:	A text on computer security could be helpful. For example: Ross Anderson: Security Engineering. Wiley, 2008.
